**DETAILED ACTION**

**EXAMINER'S COMMENT**

***Response to Amendment***

1. The affidavits filed on 12/15/09 under 37 CFR 1.131 is sufficient to overcome the Kil et al. reference.

***Allowable Subject Matter***

2. Claims 27 and 29-49 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The applicant's independent claims discloses, *inter alia*, a method, access device and system of supporting an incoming/outgoing mobile communication session in a combined communications network comprising a mobile network and a non mobile access network in said mobile network wherein said mobile communication session is associated with a mobile number and wherein providing at an access node between the non-mobile access network and the mobile network, an access device comprising a Digital Service Line Access Multiplexer (DSLAM) or an Optical Line Termination (OLT), the access device being in communication with a plurality of non-mobile devices in the non-mobile access network; establishing direct connection and direct signaling and communications exchange between the access device and a controller of the mobile network and providing the access device with a capability to perform functions of a base

Art Unit: 2617

station with respect to at least one said mobile number of said mobile network, so that the access device is recognized by the controller of the mobile network as a base station; and by assignment in the access device, associating said mobile number with a non-mobile device of said non-mobile network wherein said non-mobile device being either a DECT-like device or a fixed device so that the access device becomes operative to represent said non-mobile device of said plurality of non-mobile devices as having said mobile number; and routing said mobile communication session either through a mobile device associated with said mobile number in the mobile network or through the non-mobile device associated with said mobile number in the non-mobile network.

4. The following are details of the closest prior arts of record found:

Byrne discloses a multimode radio telephone capable of being operated in more than one telephone system and capable of performing handover of a call from a cordless system to a cellular system or vice versa and wherein Byrne discloses a community cordless base station being directly connected to a mobile switching center and base station controller of the cellular network.

Beyette discloses a hybrid telephone network utilizing a wireless link and landline services having a cell interface module (CIM) and landline interface module (LIM) which cooperate to perform switching functions and establishing one or more communication channels between phones over the wired network wherein a cell phone telephone number is associated with a landline telephone number so that an incoming call for the

Art Unit: 2617

cell phone number can be answered using a landline telephone and wherein when a user is able to use the landline phone to place a call through a cell phone and using the cell phone number and wherein when the user engaged in a conversation using his cell phone enters a building, the user is able to continue the conversation using the landline phone by placing the cell phone on the CIM and picking up the landline phone.

Wong discloses the use of a Digital Subscriber Line Access Multiplexer (DSLAM) wherein a group of subscribers is able to access the internet via a DSLAM and wherein Wong discloses the advantages of using a DSLAM which enables a phone company to offer business or homes users the fastest phone line technology (DSL) with the fastest backbone networking technology (ATM).

5. None of the cited references and the prior art of record either alone or in combination discloses the subject matter described in the applicant's independent claim above. Specifically, the subject matter related to "an access device comprising a Digital Service Line Access Multiplexer (DSLAM) or an Optical Line Termination (OLT), the access device being in communication with a plurality of non-mobile devices in the non-mobile access network; establishing direct connection and direct signaling and communications exchange between the access device and a controller of the mobile network and providing the access device with a capability to perform functions of a base station with respect to at least one said mobile number of said mobile network, so that the access device is recognized by the controller of the mobile network as a base station."

Art Unit: 2617

6. Therefore, since none of the cited references and prior art of record found discloses the specific subject matter described above, the applicant's claims 27 and 29-49 are allowed.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
